

Who decides what: model suggestions versus software decisions

THE MODEL MAY PROPOSE

Finish
"I think the task is done"

History
summary of what happened

Shared state
a proposed fact or artifact

Memory
a note worth keeping

Improvement
a proposed prompt or policy

proposal

proposal

proposal

proposal

proposal

SOFTWARE MAKES THE LAST CALL

Pass or fail
tests + fresh review

Official record
single append-only event writer

Accepted shared state
validator

Stored memory
source + later-use signal

Promoted change
fixed scorer + held-out tasks

This separation is what the old phrase "authority outside the model" meant.
