

# The Hairspring pipeline: the model proposes, the substrate decides

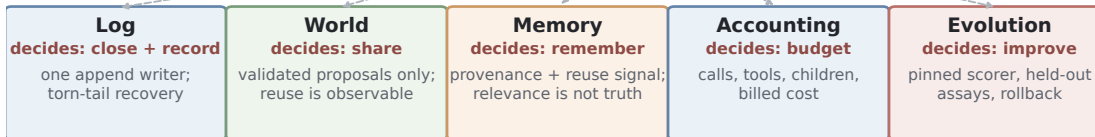

**INSIDE THE WORKING CONTEXT** - the model is free to search, edit, call tools, delegate, revise

**OUTSIDE THE MODEL** - the substrate holds the five authorities

**The same record feeds five authority planes**

A mission closes only when the checks pass and the critic finds no blocking defect. The outcome, the evidence, and every step land in one replayable record. Recovery, shared state, memory, accounting, and evolution all read that same record.
