

# The improvement loop: a candidate must beat its parent under a scorer pinned before it existed

The inner loop repairs the task. This outer loop changes the policy that drives the worker - and no candidate grades itself.

## observed live promotions (two-task assays; they prove the path works, not a population rate)

cycle 1: equal pass count, 94 → 52 total steps (-44.7%) - candidate promoted through the live TUI path

cycle 2: equal pass count, 76 → 41 total steps (-46.1%) - a fabricated rejection verdict was caught and voided, not shipped
